

BLEC

VIBRA - SANDMASTER

OUTSTANDING FEATURES INCLUDE:

- ** DE-COMPACTING AND SAND SLITTING ALL IN ONE PASS**
- ** VIBRA TINE SYSTEM PERMITS USE OF SAND OR GRAVEL AND VARIOUS SOIL AMENDMENTS**
- ** VERY LITTLE SURFACE DISTURBANCE**
- ** IDEAL FOR BOTH FINE TURF AND SPORTSFIELD APPLICATIONS**
- ** AVAILABLE IN 1m - 1.5m - 2m WORKING WIDTHS**

PLEASE ASK FOR A DEMONSTRATION

The BLEC Vibra - Sandmaster has been manufactured to fulfil the growing demand for a one pass de-compactor and slit drainage machine, that will effectively work on all sportsfields with very little surface disturbance.

The combination of the Ground Breaker and Sandmaster working in tandem can produce a matrix of sand slits at 26cm centres with virtually no surface disturbance.

The unique vibrating tine system permits the use of damp or dry sand, gravel or various soil amendment materials down to a depth of between 75cm - 175cm depending on conditions.

The Ground Breaker can be detached from the Sandmaster in minutes to carry out de-compacting works separately. Model GB 1000MT is equipped with a wheel kit and drawbar for working with smaller tractors 35-40hp

The Sandmaster can be operated by one driver and a modern tractor equipped with a creep speed or hydrostatic drive transmission with 1 double acting spool valve. Transportation is made easy by the use of hydraulic lifting cylinders mounted to the front and rear of the machine. Please see separate leaflet for specifications.
